Spot TV

WE ARE SO MUCH MORE THAN LIVE STREAMING

We know this is new for you, but with over a decade of online streaming experience we thought we could provide you with an easy comparative checklist so you can best understand your Industry options.

Visit us online at www.spottv.pro!

To start,

HD STREAMING IS OUR STANDARD...

AT 5X LESS THE PRICE.

In addition,

WE HAVE STREAM SHIELD™...

"THE GREATEST SECURITY RELEASE

IN ONLINE STREAMING HISTORY

FOR CHILD ACTIVITY CENTERS!"

FAQs

WHAT IS THE STREAMING DIFFERENCE?

Many other solutions will directly use your local bandwith or re-skin a costly 3rd party solution like AWS or WOWZA, these types of streaming solutions maintain a constant camera connection to the cloud from the local internet. This is actually the downside of using other 3rd party providers as the camera streams are eating up your local bandwidth whether your system is being viewed or not.

Spot TV is a proprietary On-Demand Cloud Relay Solution which utilizes the cloud and real time viewing factors to deliver optimal streaming while minimizing local bandwidth usage.

DOES SPOT TV REQUIRE A CONTRACT?

Yes and no. If we do not supply any equipment, no. If we are supplying equipment, yes (only 12 months though). We do this because your monthly program includes an unprecedented Industry warranty. If a camera or any supplied equipment fails, we typically already know, and are shipping a camera same day and will have an authorized tech onsite within 1-3 business days **AT NO ADDITIONAL COST TO YOU!** You have a business to run, you don't have the time to troubleshoot or fix a down camera.

*Other providers are charging 2-5x our monthly rate and do not provide this type of white glove experience!

WHAT IS STREAM SHIELD ?

Stream Shield is the latest security update to the Spot TV family mobile app that alerts, detects, and prevents screenshots and screen captures in both the IOS and Android app.

*Patent Pending Stream Shield Technology (No. 62/873,573).

SCREENSHOT

Detect and protect against a user taking a screenshot via the buttons on their device.

SCREEN CAPTURE

Detect and protect against a user taking a screen recording via their device settings.

SCREEN MIRRORING

Detect and protect against attempts to use AirPlay or Screen Mirroring to copy/display content.
